*1: Only 1-channel type is mountable.

*2: When receiving current input (current pulse), external shunt resistor (receiving resistor) is required.

*3: Only one VJET can be mounted in slot 16 of the base. Do not mount it in other slots.

*4: For VJR6 (style 3.0 or later) and VJU7, the wiring resistance of input terminals "1" and "3" must be the same.
For VJR6 (style 2.0 or earlier), the wiring resistance of input terminals "1" and "4" must be the same.

*** in the figure above denote a slot number. Slots are numbered from 1 to 16, beginning with the leftmost slot, when viewed from the VJCE front.

Assignment of RS-485 communication terminals (Output-2 terminals)

| Terminal Number | Signal Symbol |
|-----------------|---------------|
| ① | RS-485 B (+) |
| ② | RS-485 A (-) |
| ③ | RS-485 COM |

* The terminal for output-2 is multidrop-connected to the output-2 of all slot.
