1 About this Document

This document regarding the TRANSIC Extractive:

- Contains information required during the life cycle of the System.
- Is available to all those people who work with the System.

Please read this document carefully and make sure that you understand the content fully before working with the System.

1.1 Limitation of Liability

Applicable standards and regulations, the latest state of technological development and many years of knowledge and experience have all been taken into account, when assembling the data and information contained in this document.

The manufacturer accepts no liability for damage caused by:

- Failing to observe this document.
- Non-compliance of notices and regulations.
- Unauthorized installation and mounting of the TRANSIC Extractive.
- Arbitrary modifications.
- Use of unauthorized spare parts, consumables and accessories.

With special variants, where optional extras have been ordered, or owing to the latest technical changes, the actual scope of delivery may vary from the features and illustrations shown here.

1.2 Purpose of this Document

This document describes the TRANSIC Extractive.

1.3 Target Group

This document is intended for qualified personnel which are authorized to perform installation, operation, and maintenance on the TRANSIC Extractive.

1.4 Further Information

Special local conditions

Follow all local laws, technical rules, and company-internal operating directives applicable at the respective installation site of the TRANSIC Extractive.

Preserving the documents

This document and the additional technical documentation and information must be:

- Available for reference
- Passed on to new owners

1.5 Additional Technical Documentation

• Operating instructions of the following system components:

Component	Manufacturer
OI_TRANSIC151LP	SICK

- Technical System-Documentation (EPLAN) contains:
 - Technical Data
 - Wiring diagram
 - Gas flow diagram

1.6 Document Conventions

Instruction

Refer to another document.

All units of measurement in this document are originally metric units.

Subject to change without notice. Images might differ from actual design.

2 Important Safety Instructions

Read and follow all safety instructions in this document.

2.1 Supplemental Directives

🔨 🛛 WARNING

- Read and understand this document carefully prior to working on the system or any other of its components.
- Only fully trained professionals from the respective field are permitted to work on the system.
- Follow all operational procedures.
- ► Follow all local regulations.
- Follow all local regulations regarding working with gas and electrical components.
- Entry to system area is only permitted to authorized personnel.
- ► Wear personal protective equipment (PPE) while on the system area.

2.2 Safety Conventions

Symbols on system and system components labels, safety labels and in safety messages inside this document are according to the current standards.

The following conventions for signal words are used in this document, complying with ANSI Z535.6:

DANGER
DANGER indicates a hazardous situation with a high risk level, which if not avoided, will result in death or serious injury.

🔨 WARNING

WARNING indicates a hazardous situation with a middle risk level, which if not avoided, could result in death or serious injury.

CAUTION indicates a potentially dangerous situation with a low risk level, which if not avoided may lead to minor or moderates injuries.

NOTICE

NOTICE is used to address practices not related to personal injury but to property damages.

Indicates important information and useful hints.

2.3 Warning Signs

Sign	Significance
	Hazard (general)
4	Hazard by voltage
EX	Hazard in potentially explosive areas
	Risk of explosion
	Hazard by laser
	Hazard by oxidizing substances
	Hazard by hot surfaces
¥_	Hazard for the environment, nature and organic life

2.4 Mandatory symbols conventions

Symbol	Significance
	Refer to another document

2.5 Safety Messages

	DANGER
Δ	LASER Protection Class 1
*	Hazard by laser. Serious injuries.
	Do not place reflective objects directly into the probe.
	DANGER
	RISK BY OXIDATION PROCESS
	Death or serious injury will occur.

Check ambient conditions before start installation and/or commissioning.

NOTICE

ELECTROSTATIC CHARGE

Note the ESD regulations. Do not touch components inside the enclosure, these can be damaged.

HAZARDOUS VOLTAGE

The system is supplied with mains voltage from the grid. Danger of electrocution - contact will cause electric shock, burn or death.

- Only qualified personnel can perform electrical works on the system.
- Always exercise caution when handling cables and connectors.
- Before working on the system:
 - ► Follow operational procedures such as Lockout-Tagout.
 - Check that there is no residual voltage by measuring AC voltages.

WARNING

DANGER

FLAMMABLE OR EXPLOSIVE GAS MIXTURE

Serious injuries.

- To avoid inflammable or explosive gas mixtures we recommend to use only Nitrogen (N₂) as propellant gas.
- If an inflammable or explosive gas mixtures can not be avoided ensure proper treatment or disposal (exhaust) after sample gas outlet.
- If calibrating the TRANSIC151LP with ambient air, ensure proper treatment or disposal (exhaust) after sample gas outlet.

2.6 Notices

NOTICE

SYSTEM WARRANTY

If you disregard the safety and hazard precautions, no warranty claim for damages will be honored. If you alter parts of the System by your own initiative, all warranty claims will be forfeited.

- Regard all safety and hazard precautions.
- ► Use only material supplied or approved by SICK for the system maintenance.
- Do not alter the system.

NOTICE

SYSTEM DAMAGE

Damage to any system components or parts can lead to malfunction of the entire System. Do not ignore damaged or broken parts, refer to this manual and contact SICK support immediately.

Do not install damaged parts.

2.7 Intended Use

The TRANSIC Extractive is a stationary system and serves continuous measurement of oxygen in the industrial sector.

The sample gas is taken from a sampling point and feed through the gas analyzer (extractive measurement).

Operation in explosion-hazard areas

Suitable for areas according to ATEX and IECEx (IEC 60079-10).

For further and detailed information about intended use of the TRNSIC151LP, refer to the respective Operating Instructions.

2.7.1 RoHS Directive

This product is designed for applications in large industrial plants according to Article 2 (4) e, RoHS 2011/65/EU and can therefore only be used in such systems.

The product is neither suitable nor approved for use outside of theses systems. SICK cannot assume any kind of warranty or liability for use outside of these systems.

2.7.2 Measured components

Gases	O ₂ (Oxygen)

2.7.3 Measuring range

Component	Range	Unit
02	0 21	%
	0 100	%
ambient measurement	2 21	%

2.8 Requirements for the Qualification of Personnel

Qualified personnel

- Qualified personnel have the specialist training, skills, and experience, as well as knowledge of the relevant regulations and standards, to be able to perform tasks delegated to them and to detect and to avoid any potential dangers independently.
- Electricians have the specialist training, skills, and experience, as well as knowledge of the relevant standards and provisions to be able to carry out work on electrical systems and to detect and avoid any potential dangers independently.

3 System Description

3.1 Characteristics

The TRANSIC Extractive is an analysis system to measure and monitor oxygen.

The TRANSIC Extractive works extractive, i.e. the gas to be measured is taken from the gas duct using a gas extraction probe or probes and fed to the analysis system via sample gas line(s).

Fig. 1: TRANSIC Extractive system components

Legend

- 1 TRANSIC151LP
- 2 Needle valve
- 3 Flow meter
- 4 Manual valve sample gas/reference gas
- 5 Sample and propellant gas outlet
- 6 Voltage supply unit
- 7 Injector pump
- 8 Propellant gas inlet
- 9 Pressure reducer
- 10 Grounding point

3.2 Gas Flow Diagram

Fig. 2: TRANSIC Extractive gas flow diagram

3.3 Method of Operation

The sample gas is fed through gas analyzer and flow meter via injector pump. The sample gas and the propellant gas are mixed in the injector pump. This gas mixture is fed to the sample gas outlet.

FLAMMABLE OR EXPLOSIVE GAS MIXTURE

Serious injuries.

- To avoid inflammable or explosive gas mixtures we recommend to use only Nitrogen (N₂) as propellant gas.
- If an inflammable or explosive gas mixtures can not be avoided ensure proper treatment or disposal (exhaust) after sample gas outlet.
- If calibrating the TRANSIC151LP with ambient air, ensure proper treatment or disposal (exhaust) after sample gas outlet.

3.3.1 Settings

The sample flow rate can be adjusted via needle valve and/or propellant gas pressure reducer:

- ► Needle valve open higher sample gas flow.
- ► Needle valve close lower sample gas flow.
- ► Higher propellant gas pressure higher sample gas flow.
- Lower propellant gas pressure lower sample gas flow.
- For calibration with ambient air or reference gases sample gas inlet can be switched via manual valve.

For further and detailed information about calibration of the TRANSIC151LP, refer to the respective Operating Instructions.

4 Installation

4.1 Mounting Plate

Fig. 3: Mounting plate dimensions/connections

- Appropriate installation site:
 - Wall
 - Frame
 - Rack
- Appropriate fixing material
 - Bolts
 - Nuts
 - Dowels
 - Anchoring
- (A) Grounding point
- Line connectors
 - (B) Sample and reference gas connectors: Swagelok 6 mm (2x)
 - (C) Sample gas exhaust: Swagelok 10 mm
 - (D) Propellant gas inlet: Swagelok 6 mm

Operation 5

5.1 Interfaces

- Keypad •
- Maintenance interface

Note

Changes to parameters are password protected. The password allows access for 30 minutes after entry.

5.1.1 Keypad

A display and four pushbuttons are located on the front enclosure panel.

The measured oxygen is shown on the display. LEDs signal the operating mode.

Characteristics Calibration of:

- Process pressure
- Humidity •
- Carbon dioxide content

- 1 LED (red/yellow/green)
- 2 Seven-part display
- 3 Up Upwards button
- 4 Dn Downwards button
- 5 Back - Back button
- 6 Ent Input button

Fig. 4: Keypad (source: TRANSIC151LP operating instructions)

Display modes

Display mode	Display/LED	Process
Start (duration: 2,5 minutes)	Software Version Self test Pass	Self-test starts Information: Self-test running Warming up phase starts
Normal operation	Green LED remains on Measured oxygen value	Measured oxygen value is shown continuously
Error state	Red LED remains on Error state number	
Warning	Yellow LED flashes Measured oxygen value is dis- played	Select function "Err" in the menu

5.2 Maintenance Interface

The maintenance interface is located on the connector block above the display.

Functions • Maintenance

- Calibration
- Changing parameters
- Configuration of alarm thresholds

For further and detailed information about operation, maintenance, and calibration of the TRANSIC151LP, refer to the respective Operating Instructions.

6 Maintenance

For further and detailed information about maintenance of the TRANSIC151LP, refer to the respective the Operating Instructions.

7 Technical Data

The exact device specifications and performance data of the product may deviate from the information provided here, and depends on the respective application and customer specifications.

Measured value	02
Max. number of measured values	1
Measuring principle	Diode laser spectroscopy (TDLS)
Measuring ranges	0 ₂ : 0 5 Vol% / 0 100 Vol%
Response time (t ₉₀)	<u>≤</u> 10 s
Accuracy	<u>≤</u> 0,2 Vol%
Zero point drift	± 0,1 Vol% per year
Process temperature	-20 °C 200 °C
	(other temperature ranges on request)
Process pressure	800 hPa 15.000 hPa
Annelisent terrere en terre	(further pressure ranges on request)
Ampient temperature	-20 °C +60 °C
Storage temperature	-20 °C +80 °C
Ex-approvals - IECEx	II 1/2G Ex ib IIB T4 Gb; II 2D Ex ib tb IIIC T85 °C Db
	Measuring probe: II 1/2G Ex op is IIB T4 Ga; II 2D Ex ib tb IIIC T85°C Db
	Power supply: Il 2G Ex e mb [ib] IIB T4 Gb; II 2D Ex tb [ib] IIIC T85°C Db
Ex-approvals - ATEX	Sender/receiver unit: II 1/2G Ex ib IIB T4 Gb; II 2D Ex ib tb IIIC T85°C Db
	Measuring probe: II 1/2G Ex op is IIB T4 Ga; II 2D Ex ib tb IIIC T85 °C Db
	Power supply: II 2G Ex e mb [ib] IIB T4 Gb; II 2D Ex tb [ib] IIIC T85 °C Db
Ex-approvals - NEC/CEC (US/CA)	Sender/receiver unit: Class I, Division 2, Group A, B, C, D T4
	Measuring probe: Class I, Division 1 + 2, Group A, B, C, D T4
Electrical safety	CE
Protection class	IP66
Analog outputs	1 output: 0/4 20 mA, 500 Ω
	1 output:
	0/4 20 mA, 200 Ω
	Only for ATEX/IECEx version TRANSIC151LP.
Digital outputs	1 relay contact: 30 V AC, 1 A/60 V DC, 0,5 A
	1 NAMUR output:
Interface	DUILY IN ALEA/ IEVEX VEISION TRAINSICTOTE.
Interfaces	RS-465 (flot for ATEX/IECEX version) RS-232c (Service interface; not in ATEX/IECEx design) USB (not approved for Ex-applications)
Dimensions (W x H x D)	500 x 500 x 400 mm / 19.68 x 19.68 x 15.74 in
(depending on version)	
Weight (depending on configuration)	15 30 kg / 33.06 66.13 lbs

Power supply - Voltage	24 V DC TRANSIC151LP: 21,626,4 V For ATEX/IECEx version via TSA151, a PELV power supply is mandatory
Power supply - Current consumption	≤ 500 mA TRANSIC151LP: ≤ 240 mA (depending on version)
Power consumption	\leq 6 W TRANSIC151LP: \leq 5,2 W (depending on version)
Corrective functions	Adjustment with ambient air or test gases
Test functions	Contamination check

8 Disposal

Note the relevant currently valid local and legal environment regulations and directives for the disposal of industrial and electronic waste.

NOTICE

DISPOSAL OF BATTERIES, ELECTRIC- AND ELECTRONIC DEVICES

- According to the European Directives, batteries, accumulators and electrical or electronic devices must not be disposed of in general waste.
- The owner is obliged by law to return this devices at the end of their life to the respective public collection points.
- This symbol on the product, its package or in this document, indicates that a product is subject to these regulations.

The following assemblies may contain substances which must be disposed of separately:

• Electronic:

Capacitors, accumulators, batteries.

• Displays:

i

Liquid in the LC-Displays.

• Sample gas lines:

Toxic substances of the sample gas could be penetrated or adhered into soft materials of the gas path (e. g. hoses, seal rings). Please check if such effects must be taken into account during disposal.

• Analyzer modules:

For detailed information to the disposal of analyzer modules, refer to the respective Operating Instructions.
