## EJA118E Diaphragm Sealed Differential Pressure Transmitter

GS 01C31H01-01EN

[Style: S2]

Diaphragm seals are used to prevent process medium from entering directly into the pressure-sensing assembly of the differential pressure transmitter, they are connected to the transmitter using capillaries filled with fill fluid.

EJA118E Diaphragm Sealed Differential Pressure Transmitters can be used to measure liquid, gas, or steam flow, as well as liquid level, density, and pressure. EJA118E outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure.

Its highly accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications, and self-diagnostics.

FOUNDATION Fieldbus, PROFIBUS PA and 1 to 5 V DC with HART (Low Power) protocol types are also available. EJA-E series models in their standard configuration, with the exception of the Fieldbus, PROFIBUS and Low Power types, are certified as complying with SIL 2 for safety requirement.

### ■ STANDARD SPECIFICATIONS

Refer to GS 01C31T02-01EN for Fieldbus communication type and GS 01C31T04-01EN for PROFIBUS PA communication type for the items marked with “◇.”

\*1: See table 3 ‘Gasket contact surface’ on page 6.

\*2: Even in case where fill fluid code D (fluorinated oil) is selected, if degrease cleansing treatment or both degrease cleansing and dehydrating treatment for the wetted parts is required, specify option code K1 or K5.

\*3: The specified capillary length includes the extension length (X2) and the flange thickness (t).

- 
- \*4: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids.  
Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.
  - \*5: Forged version of the material may be used.
  - \*6: The upper ambient temperature limit is 50°(122°F) when specifying process connection size code 3 (3-inch).

**< Ordering Information >**

Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units:
  - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify LRV as greater than URV. When square root output mode is specified, LRV must be "0(zero)".
  - 2) Specify only one unit from the table, 'Factory setting.'
3. Select linear or square root for output mode and display mode.  
 Note: If not specified, the instrument is shipped set for linear mode.
4. Display scale and units (for transmitters equipped with the integral indicator only)  
 Specify either 0 to 100 % or 'Range and Unit' for engineering units scale:  
 Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding '/' is longer than 6-characters, the first 6 characters will be displayed on the unit display.
5. HART PROTOCOL  
 When output signal code is "J", specify the HART protocol revision "5" or "7".
6. TAG NO (if required)  
 Specified characters (up to 16 characters for BRAIN, 22 characters for HART, or 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
7. SOFTWARE TAG (for HART only, if required)  
 Specified characters (up to 32 characters) are set as "Tag" (the first 8 characters) and "Long tag"<sup>\*1</sup> (32 characters) in the amplifier memory. Use alphanumeric capital letters.  
 When the "SOFTWARE TAG" is not specified, specified "TAG NO" is set as "Tag" (the first 8 characters) and "Long tag"<sup>\*1</sup> (22 characters) in the amplifier memory.  
<sup>\*1</sup>: applicable only when HART 7 is selected.
8. Other factory configurations (if required)  
 Specifying option code **CA** or **CB** will allow further configuration at factory. Following are configurable items and setting range.  
 [/CA : For HART communication type]  
 1) Descriptor (up to 16 characters)  
 2) Message (up to 30 characters)  
 3) Software damping (0.00 to 100.00 s)  
 [/CB : For BRAIN communication type]  
 1) Software damping (0.00 to 100.00 s)
9. Process fluid temperature for zero compensation (When /R is specified.)
